Education

M.S. Computer Science, California Polytechnic State University — Expected December 2027

B.S. Computer Science, California Polytechnic State University | 3.5/4.0 GPA — Graduated June 2026

Skills

Languages: Python, TypeScript, JavaScript, SQL, Bash, C
Frameworks: React, React Native, Expo, Next.js, Node.js, Express, FastAPI
Cloud and Data: AWS (Lambda, SQS, EC2, CloudFormation), Terraform, GCP, Firebase, Supabase, MongoDB, Redis
Tools and ML: Git, GitHub Actions, Jenkins, XCode, Docker, Kubernetes, Grafana, Linux, TensorFlow Lite, YOLO

Work Experience

ATPCO — May 2026 – Present

Cloud Engineering Intern — *Remote*

- Engineered a two-stage deployment pipeline using Jenkins, AWS Lambda, and CloudFormation, enabling 20 engineering teams to promote Grafana dashboards and alerts to production in under 2 minutes.
- Rolled out a custom Kubernetes observability plugin, saving my team $10K a month in proprietary plugins.
- Built a Lambda cost-attribution service that allocates log-query and AI-assistant spend to individual teams in Grafana, giving hundreds of engineers visibility into cost spikes.

Noch Inc. — October 2025 – May 2026

Software Engineering Intern — *San Luis Obispo, CA*

- Reverse-engineered and maintained an undocumented React/Node.js platform, standardized 8 core data schemas, and implemented 3 feature modules including Stripe payment processing.
- Established automated unit testing with Vitest, achieving 88% branch coverage; integrated SonarQube static analysis and documented system architecture and development workflows.

Cal Poly — June 2025 – October 2025

AI and Computer Vision Researcher — *San Luis Obispo, CA*

- Co-authored and presented "AI-Powered Accessibility Tracker for Inclusive Public Spaces" at SCAIR 2025.
- Trained custom YOLO models and deployed them on-device with TensorFlow Lite for real-time hazard detection at ∼40 ms/frame (0.78 mAP@0.5), eliminating server-side inference.
- Built a cross-platform React Native/Expo app with Firebase, GCP APIs, and geospatial mapping that lets users photograph and map accessibility hazards.

Odin Diagnostics — September 2024 – May 2025

Cloud Engineering Intern — *San Luis Obispo, CA*

- Built the foundational cloud architecture for local concussion diagnostics startup. A production AWS pipeline (Lambda, SQS, EC2) that automates concussion-data ingestion, working around Windows-only API constraints.
- Developed a Python library applying linear algebra to transform 3D gaze vectors into world-space coordinates and extract 40+ diagnostic features from raw eye-tracking data.
- Cut stored data volume by 99% and optimized batch processing to stay within AWS Free Tier.

Consulting Projects

Tesla - Industry Collaboration — October 2025 – March 2026

Technical Lead — *Remote, CA*

- Co-led a 10-person student team building a React Native app for employee parking and shuttle logistics, running sprint reviews directly with Tesla management; the app is now being prepared for production rollout by Tesla.
- Built Node.js/Express APIs over Microsoft SQL Server with a Redis cache, serving real-time parking and shuttle availability from internal endpoints, with sub-50 ms p95 response times.

Hack4Impact — September 2024 – June 2026

Technical Lead — *San Luis Obispo, CA*

- Co-led a cross-functional team of 9 to build and deploy a Next.js job and event board for Spokes, a local nonprofit, saving staff 20+ hours of manual work per week.
