EDUCATION

California Polytechnic State University
B.S. / M.S in Computer Science, Minor in Mathematics

3.5 GPA | Expected Spring 2027
San Luis Obispo, CA

SKILLS

Languages: Python, TypeScript, JavaScript, SQL, C
Frameworks: React, React Native, Expo, Next.js, Node.js, Express, FastAPI, Tailwind CSS
Cloud and Databases: AWS, GCP, Firebase, Supabase, MongoDB, Redis
Tools: Git, GitHub Actions, Linux, Docker, Jira, Confluence, Tensorflow Lite, YOLO

EXPERIENCE

ATPCO May 2026 - Present
Cloud Engineering Intern Remote

- Supporting cloud-based systems for large-scale data processing, contributing to infrastructure improvements
- Developing automation scripts to streamline data workflows and reduce manual operational overhead
- Working with AWS to monitor system performance and build tools for observability and system health

Odin Diagnostics September 2024 - June 2025
Cloud Engineering Consultant San Luis Obispo, CA

- Architected a hybrid event-driven pipeline using **AWS Lambda** for data routing and ephemeral **EC2** instances (Windows) to handle OS-specific APIs, enabling automated concussion data ingestion for **machine learning**
- Developed a **Python** processing library utilizing **linear algebra** to transform 3D gaze vectors into world-space coordinates, extracting 40+ diagnostic features while reducing data footprint by 99%
- Engineered a cost-optimized architecture using **SQS** to trigger auto-scaling **EC2** instances for batch processing, ensuring the infrastructure operated entirely within the **AWS Free Tier** by minimizing compute uptime

Tesla October 2025 - March 2026
Software Engineering Consultant San Luis Obispo, CA

- Built a **React Native** logistics and parking availability application to help optimize employee commuting and reduce congestion near Tesla facilities
- Developed backend APIs using **Node.js/Express** to support real-time parking and availability data
- Utilized **Microsoft SQL** for structured data and **Redis** caching for low-latency, high-frequency data retrieval
- Collaborated with cross-functional student teams to design, iterate, and deliver scalable system components

Cal Poly May 2025 - Present
Undergraduate Researcher San Luis Obispo, CA

- Co-authored and presented a paper at **SCAIR 2025**; extending the work into the MVP for an M.S. thesis on **visual RAG for accessibility**. Exploring **semantic retrieval** approaches in visual RAG.
- Built a cross-platform **React Native/Expo** and **Firebase** app (iOS/Android) with geospatial mapping utilizing **GCP** APIs and real-time image pipelines to crowdsource accessibility hazards
- Engineered on-device inference with **TensorFlow Lite** to run custom **YOLO** models directly on mobile hardware, enabling real-time detection without server latency
- Implemented **CI/CD** workflows using GitHub Actions to automate testing and deployment for project repositories

Shift Startup December 2025 - Present
Freelance Software Engineer Remote

- Building the MVP for a SaaS analytics platform that ingests **Google Ads** data and uses **LLM-assisted analysis** to surface optimization recommendations for small businesses
- Built a real-time data pipeline with **Python**, **FastAPI**, and **Supabase** to sync campaign data from the **Google Ads API**, enabling low-latency retrieval for dashboard queries and AI analysis

PROJECTS

Hack4Impact September 2024 - Present
Technical Lead San Luis Obispo, CA

- Co-leading a team of 9 developers and designers to build a **Next.js** event board for nonprofit organization Spokes
- Translating vague requirements into actionable technical tickets, **frontend** components, and bi-weekly sprint plans
- Previously delivered a full-stack **Next.js** reservations platform, digitizing client workflows and saving staff an estimated 20+ hours of administrative work per week
